

Float or Sink?

Does it float or does it sink? Using a range of everyday items, you can conduct a simple experiment with your children and encourage them to make predictions about the results.

Float or Sink?

1. Fill a bowl or container up with water and gather items around the house and garden that can be used for the experiment.

2. Before adding your objects to the water, ask your children to predict which objects they think will sink and which will float.

3. Now let the children drop the objects, one by one, into the water and observe what happens

**This activity requires adult supervision.
Do not leave your child un attended.**
